10 FIELD OF THE INVENTION

The present invention relates to video-based recognition and tracking systems for recognizing within the frames of digitally-based video data an object of interest against a background of objects not of interest, and for confirming that the object is of the type that is desired to be detected, e.g., a human intruder for a security type system, and continuing to track the object and confirm its categorization as an object of interest.

RELATED APPLICATIONS

This application is related to the contemporaneously filed applications of the common assignee of this application having the same inventors and having Attorney Docket Nos.: 1044-411-01 and 1044-412-01, the disclosures of which are hereby incorporated by reference.
